Abstract

The study determined the routine, thoughts, and emotions of Tricycle Drivers of Fatwiba D.P. Toda at Nangka, Marikina. This was accomplished through an Ethnographic study. The researchers observed the tricycle drivers for four (4) whole mornings. Four (4) hours per day on Tuesday, Thursday, and Friday to accomplish the required sixteen (16) hours. The purpose of this observation is to gather enough information about the Tricycle Drivers that are needed for the study.

After the observations and evaluation of data, the conclusions show that the tricycle drivers faced numerous challenges in their job status including road closure, hot weather conditions, and age status. In terms of behavior, thoughts, emotions, and socialization, the tricycle drivers revealed a dedicated commitment to their jobs. They demonstrate their strategies and their coping mechanisms while facing their job every day.

Keywords: Social Identity theory, TODA, tricycle, terminal, tricycle drivers, and social interaction.

CHAPTER 1

The Problem and its Background

1.1 Introduction

The everyday experiences of tricycle drivers illustrate the connection between city life and culture. This study is like a detailed exploration of how tricycle drivers interact with each other. It focuses on their role as both people who give rides and as important members of the community. By spending time with them, researchers aim to find out all about their social interactions. The study is interested in the friendships they form, the problems they face, and the special things that happen in their close-knit group. Through this study, the goal is to better understand how tricycle drivers connect with each other while driving their tricycles, contributing to a broader understanding of social life in Marikina.

Utilizing a method known as ethnographic inquiry, researchers deeply immerse themselves in the everyday lives of tricycle drivers. They observe actions, engage in conversations, and gather stories about the drivers' experiences. This method serves to comprehend not only the formal aspects of their job but also the informal, cultural elements that define their community. As the exploration delves into the drivers' daily routines, the focus shifts towards understanding the heart of their social connections. The researchers are intrigued by the friendships that develop amidst the hum of tricycle engines and the mutual support during shared challenges. The goal is to unveil the various facets of their relationships, examining collected information to understand the diverse patterns and unique stories that constitute the lives of these tricycle drivers.

This study goes beyond just understanding how tricycles work; it aims to learn more about Marikina's social landscape as a whole. By delving into the details of tricycle drivers' relationships, the hope is not only to share individual stories but also to paint a bigger picture of the culture surrounding this bustling part of Metro Manila. Using an approach grounded in the rich context of qualitative research, the goal is to provide insights that go beyond mere numbers, offering a detailed look at how tricycle drivers and the community they serve collaborate. In doing so, the aim is to contribute to a better

understanding of life in Marikina, where the voices and experiences of tricycle drivers play a crucial role in the ongoing story of community life.

1.2 Theoretical Framework

Bronfenbrenner's Ecological Systems Theory, created by developmental psychologist Urie Bronfenbrenner, provides a framework for understanding how individuals are shaped by various environmental systems. Developed in the 1970s, this theory posits that people exist within multiple layers of interconnected systems, each influencing their development and behavior. The microsystem involves the immediate, direct environments, such as family and friends. The mesosystem explores the connections and interactions between elements of the microsystem. The exosystem includes external environments that indirectly affect the individual, and the macrosystem encompasses broader cultural and societal influences. Finally, the chronosystem recognizes the impact of time on development. This theory, developed by Urie Bronfenbrenner, highlights the complexity of factors that contribute to an individual's experiences, emphasizing the interconnectedness of different environmental layers in shaping their lives.

Applying Bronfenbrenner's Ecological Systems Theory to the social interactions of tricycle drivers at Fatwiba D.P Toda in Nangka, Marikina City, Metro Manila unveils a layered understanding of their community dynamics. Within the microsystem, the immediate interactions among tricycle drivers form the core of their social experiences, influencing their behaviors and relationships. The mesosystem comes into play as connections and interactions between different drivers, as well as their relationships with the broader community, shape the overall social landscape. External factors, represented by local regulations and community infrastructure, become part of the exosystem, influencing the drivers indirectly. The broader cultural and societal influences, constituting the macrosystem, contribute to the collective norms and values that impact social interactions within this specific tricycle driver community. The ecological perspective of Bronfenbrenner's theory highlights the interconnectedness of these various environmental layers, providing valuable insights into the factors shaping the tricycle drivers' social interactions within their specific context.

1.3 Statement of the Problem

Aiming to evaluate and observe the social interaction among the tricycle drivers of Fatwiba D.T Toda of Nangka, Marikina City.

1. What is the routine of Tricycle drivers at Nangka, Marikina City in terms of;

1.1 Appearance

1.2 Physical behavior,

1.3 Verbal behavior,

1.4 Human traffic,

1.5 Personal space and

1.6 People who stand out?

2. What are the challenges of the tricycle drivers?

3. What are the coping behaviors of tricycle drivers?

4. What is the overall profile of tricycle drivers in terms of

4.1 Behaviors

4.2 Thoughts

4.3 Emotions and

4.4 Socialization

1.4 Scope and Limitations

This study aims to evaluate and describe as it has observed the social interactions among tricycle drivers in Fatwiba D.T Toda, Nangka, Marikina City. Its subjects are only the tricycle drivers within the terminal. Each researcher has selected one subject to especially focus on whenever a chance is given, therefore having five (5) subjects who were specifically observed and the general members of the mentioned Toda.

1.5 Significance of the Study

Several groups will benefit from this study once it is completed. These groups consist of the following:

Tricycle Drivers - This study aims to provide insights that can assist tricycle drivers in Marikina City in adopting healthier lifestyles. Understanding their social interactions can inform targeted interventions, promoting physical and mental well-being among this essential workforce.

Barangay authorities - For people to understand what is going on with the tricycle drivers, who are among the most influential members of society. By being informed, they can develop more responsive and effective support systems, recognizing the importance of tricycle drivers in the broader societal framework.

Future researchers - Can use this study as a reference point for comparative analyses with other occupational groups, contributing to a broader understanding of social interactions within various professional communities.

1.6 Definition of Terms

The following terms were operationally and conceptually defined to improve comprehension of the terminologies used in this study:

TODA – Tricycle Operators and Drivers' Association" or "TODA", refers to the organization of tricycle operators and drivers in a given local government unit.

Tricycle – In the Philippines, motorized tricycles, or simply tricycles (Filipino: traysikel; Cebuano: traysikol), refer to a type of motorized vehicle consisting of a motorcycle and a passenger cab attached to it.

Terminal – Refers to the designated place where all tricycle drivers stay to wait for customers to arrive.

Tricycle Drivers- Tricycle drivers refer to individuals engaged in the operation of tricycles, a common mode of public transportation in the Philippines consisting of a motorcycle with an attached sidecar. In this study, the term encompasses those providing transportation services in the locality of Fatwiba D.P Toda Nangka.

Social Interaction- The dynamic exchange of verbal and non-verbal communication, as well as interpersonal relationships and behaviors, within a social group. In the context of

San Mateo Municipal College
Gen. Luna St. Guitnangbayan I, San Mateo, Rizal
Tel. No. (02) 8997-9070
www.smmc.edu.ph

the study, it refers to the ways tricycle drivers at Fatwiba D.P. Toda Nangka engage with each other, passengers, and the broader community.

CHAPTER 2

Review of Related Literature and Studies

This chapter shows literature and studies that the researcher considered relevant to the social interaction of tricycle drivers.

Laxamana (2007) stated that a study investigated the job of tricycle drivers as companions and comrades to their travelers and the investigation discovered that tricycle drivers frequently offer close-to-home help and guidance to their travelers and that they are in many cases seen as confided-in companions. Tricycle drivers additionally assume a significant part in assisting travelers with adapting to pressure and uneasiness. These investigations give important bits of knowledge into the social cooperation of tricycle drivers with their travelers. Tricycle drivers are a significant piece of the transportation framework in many non-industrial nations, and they assume an essential part in associating individuals with one another. Tricycle drivers likewise give a significant wellspring of data and help to their travelers.

Jeon et.al., (2015) said that the research has recommended that social interaction with an in-vehicle programming specialist can work on a driver's mental state and increment street well-being. The current review investigated the chance of utilizing an in-vehicle programming specialist to moderate the impacts of driver outrage on driving way of behavior. After one or the other displeasure or unbiased mindset enlistment, 60 students drove in a test system with two kinds of specialist mediation. Results showed that both discourse-based specialists not only upgraded driver circumstance mindfulness and driving execution but in addition, lessened their annoyance level and saw responsibility. Relapse models show that a driver's displeasure impacts driving execution measures, intervened by circumstance mindfulness. The commonsense ramifications incorporate plan rules for the plan of social communication with in-vehicle programming specialists.

Mensah (2023) stated that the sociocultural dimensions of street-related linguistic activities on commercial tricycles in Uyo, southeast Nigeria, are examined in this article. In expressing their spatial street wisdom, marginal urban texts on tricycles show a

process of identity creation and the grassroots' search for ideological originality. To examine how riders' social circumstances are reflected in tricycle texts and to critically examine how riders relate their subjectivities to the audience in this type of mobile urban area, the study provides contextual analyses of the texts. We conclude that tricycle literature gives voice to a marginalized section of society by highlighting the creative aspects of a local subculture.

A few epidemiological examinations have shown that the chance of accidents for tricycle drivers is impacted, decidedly or adversely, by the presence of passengers. Little is presently known, in any case, about the social connections among tricycle drivers and travelers that moderate these impacts. The current review proposed to examine the possibly helpful jobs that travelers can play to emphatically impact the way of interactions and behavior of tricycle drivers and upgrade driver and passenger well-being in the Australian Capital Region (ACT). This elaborates a writing audit, an examination of ACT crash information relating to travelers, organization using phone of a study to 872 Demonstration occupants investigating the jobs that passengers as of now play in the driving circumstance, and the lead of three center gatherings including 28 Demonstration occupants. The discoveries shed light on the job types that passengers presently play in impacting, emphatically and adversely, their well-being and that of their driver - according to the point of view of the two travelers and drivers. The results of this study shaped the reason for a bunch of prescribed countermeasures intended to improve the well-being of the two travelers and drivers in the Demonstration. (Understanding Passenger Influences on Tricycle Driver Behavior: Implications for Road Safety and Recommendations for Countermeasure Development, 2020).

According to Mohammadi et.al., (2021), Models for depicting the tiny driving way of behaving seldom consider the "social impacts" on tricycle drivers' driving choices. Be that as it may, social impact can be produced because of collaborations with encompassing vehicles and influence drivers' driving way of behaving, e.g., the cooperations bring about mirroring the way of behaving of friend drivers. Hence, social climate and companion impact can influence the drivers' momentary way of interacting and shift the people's driving state. This study intends to investigate exact proof for the presence of a social impact, i.e., when a quick vehicle passes a tricycle vehicle, does the

driver copy the way of behaving of the passing vehicle? High-goal Fundamental Wellbeing Message informational collection ($N = 151,380,578$) from the Security Pilot Model Organization program in Ann Arbor, Michigan, is utilized to investigate the issue. The information connects with positions, rates, and speed increases of 63 host vehicles going in associated vehicles with point-by-point data on general climate at a recurrence of 10 Hz. Thorough arbitrary boundary logit models are assessed to catch the heterogeneity among the perceptions and to investigate if the associates of social impact can differ both emphatically and adversely. Results show that tricycle drivers in all actuality do mirror the way of behaving of passing vehicles - in 16% of passing occasions ($N = 18,099$ complete passings happened in expressways), tricycle drivers are seen to follow the passing vehicles speeding up. The creators found that 1.2 percent of drivers ordinarily accelerated (10 km/hr. in 10 s) during their outings when they were not passed by different vehicles. Be that as it may, if passed by a high-velocity vehicle the level of drivers who accelerated is 16.0 percent. The speed change of no less than 10 km/hr. inside 10 s term is considered as speeding up the edge. Besides, the speed increase of the subject vehicle is more probable if the speed of the subject driver is higher and additional encompassing vehicles are available. Curiously, assuming the distinction with passing vehicle speed is high, the probability of the subject driver's speed increase is lower, steady with the assumption that assuming such contrasts are too high, the subject driver might be negligibly impacted. The review gives new proof that drivers' social collaborations can change the traffic stream and the ramifications of the review results are talked about.

According to Jibril et.al (2023), the study intends to basically analyze the exercises of tricycle transportation riders (known as Keke Napep) and their social interactions with educators and understudies. Four exploration questions were raised and responded to utilizing the rate. A basic irregular inspecting strategy was utilized to choose 150 riders, 75 instructors, and 450 understudies while meetings, perception, and surveys were utilized to accumulate information from the respondents. The rate file was utilized to address the examination questions brought up in the review. The worth of the relationship coefficient was 0.87. The discoveries of the review uncovered that it essentially affected the neediness lighting of the tricycle riders in Ilorin city and most of the riders are expertly

prepared and asserted to be specialists in riding tricycles in Kwara State. The concentration additionally uncovered that the mentality and exercises of Keke Napep riders on both the educators and understudies in the Ilorin city are terrible. The review suggested that Keke Napep riders ought to go through routine preparation, re-preparing, and sharpening for both new and old individuals on the need to be security cognizant and keeping away from any illegal demonstration that is fit for discoloring their standing.

According to the Asia Pacific Journal (202), the aim of the study is to examine the impact of social attitudes and perceived behavioral control of tricycle drivers on their entrepreneurial aspirations. Furthermore, to determine whether such relationships are moderated by structural support, a total of 349 tricycle drivers in the Philippines were randomly selected to serve as respondents. Structural equation modeling was used to determine whether there were significant relationships between variables. Tricycle drivers showed that the more positive their behavioral control and personal attitudes, the more likely they were to have strong entrepreneurial intentions. Therefore, the relationship between perceived behavioral control and individuals' attitudes toward entrepreneurial intentions is moderated by perceived structural support. Learning the behavioral controls, personal attitudes, and entrepreneurial intentions of specific people, especially tricycle drivers, can help assess the feasibility of government-led entrepreneurial initiatives before implementation. This avoids wasting time, resources, and labor.

Basta driver, sweet lover." A short messy line spreads the word about them as the streets' Casanova, the most pleasant charmer, liberal individuals, and somebody who will guarantee the travelers' security. Nonetheless, behind the most lovable grin, all the rage is the fundamental justification for their every perspiration and difficult work, and due to the new occasions, everything changed. Covid Sickness (Coronavirus) has been the world's most serious issue experienced during the 2019 Pandemic. Hence, the review uses an Interpretative Phenomenological Examination (IPA) with 10 members in the review. Besides, it means to investigate the lived encounters of tricycle drivers during the pandemic, explicitly: (1) to portray the lived encounters of the respondents, (2) to depict the difficulties faced by the respondents, and (3) to depict the available resources on how they adapt up to the circumstance. Besides, considering the review, the discoveries are the accompanying: tricycle drivers encountered the pandemic's positive and adverse

consequences that show them things that they should do assuming it reoccurs. The respondents confronted difficulties and challenges brought by the pandemic and made their own ways of managing it. They additionally learned different survival techniques during the pandemic that helped them change and face the Coronavirus pandemic. ("Tatlong Gulong Ng Buhay: The Tricycle Drivers and Their Lived Experiences during the Pandemic," 2021).

According to Howart (1985) Ongoing examinations, in Nottingham Britain, of the person on foot and driver conduct, have shown that drivers leave a large portion of the social and behavioral obligation regarding staying away from mishaps to the passerby, in any event, when the walker is a kid in a local location or close to a school, or both, where most kid person on foot mishaps happen. The proof for this is of two sorts. The first depends on abstract observations of driver and walker conduct, which show that drivers never make a noticeable staying away from moving until the passerby is nearer than the halting distance of the vehicle, i.e. until it is past the point of no return. Conversely, even youngster walkers show a lot more prominent expectation of risk. The second depends on the true proportions of the speed of vehicles outside school doors. Radar speed estimations show no decrease in the speed of vehicles when youngsters are holding on to go across the street. Nor is there any expansion somewhere far off of the vehicles from the control when a child is remaining there. These perceptions are in level inconsistency with the review proof given when mishaps have happened. Predominantly, youngster person on foot mishaps is credited to the flippancy or thought-lessness about the kids by the mishap examiners, and by the courts. Our proof recommends that this proof is one-sided, and misdirecting and that passerby security could be generally actually expanded by measures pointed toward expanding the obligation of drivers to stay away from these mishaps. Specifically, it is recommended that in private streets legitimate measures ought to be utilized to compel drivers to acknowledge liability and that comparing designing and instructive measures ought to be attempted to underscore the contrast between private streets and different streets.

Richele et.al (2021) stated that as mankind advances into a period of weighty financial change, engine vehicle proprietorship quickly increments, fundamentally adjusting Earth's biogeochemical organization, bringing about natural contamination and

San Mateo Municipal College
Gen. Luna St. Guitnangbayan I, San Mateo, Rizal
Tel. No. (02) 8997-9070
www.smmc.edu.ph

loss of environmental security. Given the requirement for worldwide activity, this review, nonetheless, researched the degree of natural mindfulness concerning ecological regulations and natural city mandates in Digos City, Philippines. A quantitative-clear technique was used in utilizing the review. A changed independent survey was directed to 200 tricycle drivers of Digos City, Philippines. Results uncovered that more established tricycle drivers and the people who have long encounters have better mindfulness of natural regulations and city mandates contrasted with youthful tricycle drivers and individuals who have more limited encounters as tricycle drivers. In this manner, there is yet an extraordinary requirement for weighty support regarding ecological legitimate systems, particularly among youthful tricycle drivers in Digos City, Philippines.

CHAPTER 3

Methodology

This chapter examines the research methods employed for the study. The second section provides a detailed account of the study's location, while the third section focuses on data collection. The fourth and final section outlines the ethical processes observed during the research.

3.1 Research Design

This research will use the qualitative ethnographic approach that involves researchers studying people and their communities by spending extensive time with them, participating in their activities, and closely observing their way of life. This approach aims to understand and describe various aspects of the community, including their social, political, economic, and religious activities, as well as their beliefs and values.

3.2 Locale of the Study

This research was carried out at the Fatwiba D.T Toda terminal located in Nangka, Marikina, Metro Manila, Philippines. The selection of this particular tricycle terminal aimed to explore and analyze the social interactions among tricycle drivers in the given context.

3.3 Data Gathering

The following are the things that researchers took into consideration before, during, and after series of observations.

3.3.1 Observation

The researchers considered the following variables before, during, and after their series of observations.

(1) The people observed

The participants in this study are the tricycle drivers of Fatwiba D.T Toda, located in Nangka, Marikina, Metro Manila, Philippines. Specifically, the study focuses on tricycle drivers in their 50s to 60s who work from 8 am to 12 am.

(2) The 6 things observed

In order to gather relevant and necessary data from the persons under observation, the researchers pay close attention to these six important aspects:

- **Appearance** - Physical characteristics, clothing, grooming, and overall presentation of the individuals under observation. To understand how appearance may influence or reflect the observed behaviors and interactions.
- **Physical Behavior** - Body language, gestures, facial expressions, and other observable physical movements or action. To analyze non-verbal cues and behaviors that contribute to the overall dynamics of the observed individuals.
- **Verbal Behavior** - Spoken language, tone of voice, choice of words, and communication patterns. To capture the nuances of verbal communication and assess its impact on interactions and relationships.
- **Human Traffic** - Movement patterns, flow, and interactions among people in the observed space. To understand how individuals navigate and engage with others in the observed environment, identifying any notable patterns.
- **Personal Space** - Proximity between individuals, territorial behaviors, and the use of personal space. To examine the role of personal space in shaping social interactions and the level of comfort or discomfort among the observed individuals.
- **People who Standout** - Individuals who draw attention or stand out in some way, whether through appearance, behavior, or other notable characteristics. To identify and analyze those who may play distinctive roles or have a significant impact on the overall dynamics of the observed group.

(3) The schedule of observation

The researchers conducted four observation sessions on different days. The first observation occurred on October 31, 2023, from 8:00 am to 12:00 pm. The second observation took place on November 4, 2023, during the same time frame. The third observation was conducted on November 9, 2023, from 8:00 am to 12:00 pm. The fourth and final observation was held on November 10, 2023, from 8:00 am to 12:00 pm.

(4) The location of the observers

The observers were seated quietly at various locations. Observers A and B stayed near the canteen, while Observers C and D were situated in the waiting shed. Observer E was positioned in the lotto shop. All observer locations were facing the tricycle terminal.

(5) The rules followed in observation

The observation began by obtaining approval from the tricycle terminal's president through a permission letter. Four observation sessions, each lasting five hours, were conducted. Recording through video and audio was not allowed; instead, observers used pen and paper for note-taking. Throughout the observation sessions, observers maintained a no-conversation policy and refrained from answering participants' questions unless necessary. After each session, observers convened to discuss and consolidate their observations.

3.3.2 Interview

Interview Questions:

Subject A

- (1)** During my four days of observation at FATWIBA TODAI, I noticed that you are always wearing a white shirt, may I know the reason?
- (2)** I also noticed that you always stand up and walk around when your tricycle is still in line, may I know what you think of doing that kind of behavior?
- (3)** I noticed that you don't talk much with your fellow tricycle drivers, how do you feel that way?
- (4)** Based on what I observed of you, you take 5-8 minutes to get back to the terminal. May I know the reason for this?
- (5)** During my observation, I noticed the hot weather at the terminal,

especially in the morning. Can you describe how you cope with the hot weather at the terminal when you are working?

Subject B

(1) Based on what I observed of your activities here at the terminal, I noticed that usually, when you have a passenger to drop off, it takes a long time before you can return to the terminal. May I know the reason for this?

(2) Based on what I observed of you, I noticed that you often look around while waiting for a passenger. How do you feel about this?

(3) During my observation of you, I noticed that you don't talk to your fellow driver that often while you are in line and waiting for a passenger. May I know the reason for this?

(4) One of the things I observed is that the area where your terminal is located is hot, even the climate overall. Does this affect your service as a driver?"

(5) I also noticed, from my observation, that most of the drivers here at FATWIBA TODA are in their mid-40s to 50s. May I know what your thoughts are on this?

Subject C

Questions:

(1) Noticing several passenger and driver interactions in the terminal, were there any differences in tricycle services before and after the pandemic?

(2) Are you satisfied with the quality of tricycle services or you're looking forward for improvements?

(3) Observed that most of the drivers are in their 50s, how does this affect your perspective when it comes to tricycle services to your passengers?

(4) With the toda having female tricycle drivers, how do you perceive this changes that happened over time?

(5) We've noticed how well you provide tricycle services even with the accessibility of technology and gadgets such as phone, or were there any instances that this actually affected your work in some way?

Subject D

(1) I observed that you often encounter difficult weather conditions while driving passengers in your tricycle. How do you handle such situations?

(2) I observed that you encounter unexpected situations like road closures or diversions during tricycle rides, how do you handle this situation?

(3) I observed that passenger safety is a priority for you during tricycle rides, can you share how you ensure and prioritize their safety?

(4) I observed that you have effective communication with passengers for a positive riding experience. In what ways do you engage and communicate with them?

(5) I observed that your tricycle is consistently in good working condition. Could you describe the maintenance routines you follow to achieve this?

Subject E

(1) During my observation, I noticed that you always talk to your fellow driver while you are in line and waiting for a passenger. May I know what you like most about driving your tricycle and talking with people in the terminal?

- (2) I observed that you have effective communication with your co-workers and passengers. Could you share a story about an interesting experience while you were driving your tricycle?
- (3) Based on what I observed of your activities here at the terminal, I noticed that you are always present. Can you tell me about any problems or positive experiences that have occurred while performing your job?
- (4) I notice that most of your passengers are happy to ride with you. How do you make the tricycle ride a fun and friendly experience for both you and your passengers?
- (5) Seeing that there have been changes in roads these past few months due to the construction of a water company, how does this affect you when it comes to tricycle services, especially if some of the roads are congested or altered?

3.4 Ethical Considerations

The researchers declare that this study strictly adhered to the ethics of research. Informed consent was obtained, freedom to withdraw at any time from the study was made known to the participants, their identities were anonymized, the participants were not exposed to any physical, psychological or social harm and the results were used for research purposes only. The researchers further ensured steps to prevent bias in the interpretation of the data. Lastly, this study was self-funded and there was no conflict of interest in the conduct of the study.

Chapter 4:

Presentation, Analysis, and Interpretation of Data

This chapter contains the relevant tables about the six things observed gathered from the subjects in all four sessions, as well as the detailed interview data from the conducted focus group discussion.

4.1 Observation

4.1.1 Appearance

Table 1

Appearance of Observed Subjects

Subject A	
1 st Session	• He is a bald male • Thin body • Aged around 50 or above • Tan skin • Height approximately 5'6
2 nd Session	• Wearing a white shirt • Long black arm cover • Black pants • Slippers
3 rd Session	• Wearing sunglasses • White polo shirt • Slippers
4 th Session	• Wearing jacket with white shirt inside • Blue pants • Rubber shoes

Subject B

1 st Session	• Wearing a striped long-sleeve • White shirt or uniform • Has eyeglasses on
2 nd Session	• Wearing a white shirt with the logo of their TODA • A light blue long-sleeve underneath • Have a crossbody bag • Socks, and Crocs slippers
3 rd Session	• Mid-50s, wearing glasses • Dressed in a white long-sleeved with a stripe design underneath his white shirt adorned with the logo of the TODA. • Medium-sized blue socks and slippers
4 th Session	• Wearing a blue-striped long-sleeve with a white shirt on top • Black mid-sized socks and shoes

Subject C	
1 st Session	• Has long hair with an undercut • Stands about 5'4" tall • Has a somewhat chubby build
2 nd Session	• He has a significant tan complexion • About 35 years of age
3 rd Session	• Consistently wears sunglasses • Head dress for riding • Along with riding sleeves
4 th Session	• Consistently wears pants • Adheres to a uniform style.

Subject D

1 st Session	• Dressed in a white shirt • Faded denim shorts • He exudes a casual and relaxed personal style
2 nd Session	• He is wearing white • Yellow long-sleeves • Faded denim jeans
3 rd Session	• He is wearing a white shirt • Black leather jacket
4 th Session	• He is wearing a white polo shirt • Khaki cargo short • Baseball cap.

Subject E	
1 st Session	• A middle-aged male • Approximately 6 feet tall • Slightly chubby body frame • Bald and wears black eyeglasses • He is dressed in a white shirt • Brown pants • Carries a black shoulder bag.
2 nd Session	• He is wearing white shirt • Black and white sleeves • Creating a distinctive short-sleeved ensemble
3 rd Session	• He is wearing his uniform, consisting of a white shirt • Long pantaloons • Black shades and a towel
4 th Session	• He is dressed in a civilian shirt adorned with a design of dark green leaves • long pantaloons

4.1.2 Physical Behavior

Table 2

Physical Behavior of Observed Subjects

Subject A	
1 st Session	• He stands up most of the time • watches TV provided by the head of Toda when their tricycle is still in line.
2 nd Session	• He walks and stands a lot • Occasionally going inside the lottery stall • Going inside the food stall beside the terminal.
3 rd Session	• He stands under a tree for an extended period • Walks back and forth on the terminal • Sits very often on their tricycle
4 th Session	• He sits most of the time in the waiting shed • Occasionally stands up • Walks inside the lottery stall

Subject B	
1 st Session	• He is often seen apart from one another • Each staying on their tricycle seat • Consistently puts their foot up to the front of the tricycle • Patiently waiting for passengers
2 nd Session	• He is consistently walking around • Frequently seen engaging in conversations • Often interacts with their fellow co-drivers.
3 rd Session	• He occasionally walks around • Fixing something in his tricycle

	• Sits on his tricycle while waiting for passengers
4 th Session	• He sits in his tricycle's driver seat • Often using his mobile phone

Subject C	
1 st Session	• He is seen just sitting and watching the television in the terminal • Sit down by the waiting shed • Very few interactions among the tricycle drivers
2 nd Session	• He is mostly on his phone • He typically does not leave his tricycle except when he goes for food and approaches someone once • He is on earphones, either talking to someone or just listening to music.
3 rd Session	• He is mostly on his phone, and engaged in conversation • He lifts his feet, occasionally changing sitting positions.
4 th Session	• He shows reactions as he converses on the phone, displaying various expressions • There is a lot of movement during his conversations, suggesting engagement and animated communication

Subject D	
1 st Session	• While seated on the tricycle, he maintains a relaxed posture • Occasionally adjusts the side mirror
2 nd Session	• He consistently carries a positive tone • Occasionally taps his fingers on the handlebars of the tricycle while waiting in line.
3 rd Session	• He has a focused expression while standing straight

	• Seems aware of the surroundings.
4 th Session	• Sits comfortably on the tricycle seat, • Occasionally nodding or gesturing to convey directions • Maintains a relaxed posture • Creating a welcoming atmosphere for passengers

Subject E	
1 st Session	• He consistently stands either in the waiting shed or close to the tricycle • Often gazing into the distance with no specific focus. • Frequently inspect the tires
2 nd Session	• He maintains a certain distance from each other • Consistently remain seated on his respective tricycle seats
3 rd Session	• He exhibits open body language • Very welcoming to those who dressed in civilian clothes
4 th Session	• He maintains proximity to other tricycle drivers with whom he has engaged in conversation • Most of the individuals he considers friends exhibit open body language

4.1.3 Verbal Behavior

Table 3

Verbal Behavior of Observed Subjects

Subject A	
1 st Session	• He tends to talk to only a few people • Keeping the conversations not too close. • Quiet most of the time.

2 nd Session	• He interacts with three children who visit him • Talks to only one fellow tricycle driver
3 rd Session	• He is mostly quiet and alone • Interacting only with passengers • He tends to spend most of his time sitting and standing
4 th Session	• He socializes with numerous fellow tricycle drivers • Tends to engage in conversations with people for a long period when his tricycle is still in line.

Subject B	
1 st Session	• He is not very interactive with others • Occasionally talking to people of the same age • He consistently engages in conversations with close co-drivers • There are times when he simply stays in his tricycle, waiting for passengers
2 nd Session	• He is often seen walking around • Engaging in conversations with his co-drivers • Speaking to his passengers with a timid voice.
3 rd Session	• He engages in conversations with his fellow drivers • Jokes around with his passengers
4 th Session	• He interacts with his fellow drivers, laughing and joking around • He has a very timid voice when talking with his passengers

Subject C	
1 st Session	• He speaks at a low volume, at a close distance • Most of the time, there are few interactions.

2 nd Session	• He doesn't talk too much and is always on the phone • When approached, he typically interacts at a somewhat close distance • He is very quiet most of the time but approaches co-drivers at some point
3 rd Session	• He approached someone, seemingly close with other tricycle drivers. • After only a short amount of time, he then returned to his tricycle.
4 th Session	• He is openly talking with someone on his phone while still wearing an earphone • There is no interaction except for the one happening on the phone

Subject D	
1 st Session	• He engages in quick discussions with other passengers • displaying a balanced personality • He communicates with individuals of all ages without showing any favoritism.
2 nd Session	• He is talkative and friendly to other tricycle drivers • Always emanating positive vibes
3 rd Session	• He speaks minimally and gives passengers short answers • Usually, he engages with people his own age • Projecting a calm attitude
4 th Session	• He has a friendly and sociable demeanor • Often engaging passengers in cheerful conversations

Subject E

1 st Session	• He is talkative with nearby tricycle drivers • Occasionally engaging in conversations with other passengers. • His tone of voice is generally lower and delivered at a slow pace
2 nd Session	• He is generally friendly to others • Particularly engaging in conversations with individuals of similar age • He frequently interacts with seniors while seldom initiating conversations with those younger than him.
3 rd Session	• they engage in casual small talk • Watch TV, stand on the side, and respond promptly when new customers arrive. • A few among them are more vocal, discussing and sharing thoughts about other tricycle drivers.
4 th Session	• When he arrives at the tricycle terminal, he initiates conversations with other tricycle drivers, even those with whom he is not particularly close, • Especially engaging with the younger tricycle drivers

4.1.4 Human Traffic

Table 4

Human Traffic of Observed Subjects

Subject A	
1 st Session	• He interacts with his passengers • Engaging to strangers and other tricycle drivers.
2 nd Session	• Three children, one boy, and two girls • Some people visit him numerous times

3 rd Session	• A male old man briefly interacts but leaves immediately when he has to go.
4 th Session	• The head of TODA talks to him but leaves when he has a passenger.

Subject B	
1 st Session	• Most of the tricycle drivers leave after they have passengers and return after completing their rides • takes longer than 30 minutes before they come back from the Davtoda.
2 nd Session	• Sometimes, there are too many passengers, so they have to leave immediately and come back later to get more passengers to drop off.
3 rd Session	• Sometimes, when there are many passengers, he frequently leaves to drive
4 th Session	• He doesn't have too many passengers and is just waiting for them. • He drives passengers to a specific location, and the ride takes about 5-10 minutes.

Subject C	
1 st Session	• There are very few passengers • The drivers make trips with moderate to few frequencies. • By the afternoon, more people appear as it is close to the food stalls
2 nd Session	• Passengers and co-tricycle drivers are present • In the morning, passengers are not as frequent, but from 11 AM to 1 PM, the frequency increases

	• The line at the tricycle doesn't get long unless there is an event within the barangay
3 rd Session	• Passengers and co-tricycle drivers are present. • Passenger is very frequent • The line doesn't get long because of a few passengers
4 th Session	• Passengers and co-tricycle drivers are present • There are fewer passengers, seemingly because of the rain. • The line at the tricycle doesn't get that long.

Subject D	
1 st Session	• He takes brief breaks between rides • Return promptly after serving customers • The return interval consistently remains within the 10–15-minute range.
2 nd Session	• He has a regular pattern of quickly returning after trips, • Maintaining a consistent flow of clients
3 rd Session	• He takes longer breaks between rides, sometimes exceeding 45 minutes, • Suggesting a more deliberate approach to his tricycle service
4 th Session	• He operates efficiently, with brief departures after serving customers • The return interval, initially 10 minutes • Has gradually extended to approximately 20 minutes between rides

Subject E

1 st Session	• Many tricycle drivers typically depart briefly after securing customers • Only to return once their service is completed • The entire process often spanning a duration of 5 to 10 minutes.
2 nd Session	• Initially, the tricycle drivers would briefly depart after serving customers • Return within 5 to 10 minutes • In the current scenario, the duration has extended to over 30 minutes before they return from the Davtoda.
3 rd Session	• In this particular day, only a few drivers are on duty • The majority of them follow a pattern of departing and returning after approximately 20 minutes, while some choose to leave and do not return
4 th Session	• He promptly returned three times within a span of 5 minutes each, but subsequently, he experienced a longer absence as he secured a passenger, leading to a ride lasting approximately 20 minutes.

4.1.5 Personal Space

Table 5

Personal Space of Observed Subjects

Subject A	
1 st Session	• Talks and socializes with passengers • He maintains a distance.
2 nd Session	• He talks to three children very closely • Tends to keep them company not too close
3 rd Session	• He maintains personal space only on his tricycle • Stands under a tree far from people

4 th Session	• He tends to be accompanied by multiple fellow tricycle drivers and passengers.
-------------------------	--

Subject B	
1 st Session	• He maintains a good, not too close distance when interacting with other people.
2 nd Session	• Engaging with a not too close space
3 rd Session	• He keeps a distance and is not too close to other people.
4 th Session	• He maintains a distance and is not too close to other people in the terminal.

Subject C	
1 st Session	• Those who are staying on their tricycles are far apart. • Those who stood up were somewhat close to each other in the shed
2 nd Session	• Most of the time, this person does not leave his tricycle • He interacts quite closely with them.
3 rd Session	• They stay far apart from other drivers as they remain in their tricycles and talk to their passengers from a distance.
4 th Session	• He interacted quite closely with someone who seemed to be familiar to him.

Subject D	
1 st Session	• He engages in conversations and socializes with passengers while keeping a certain distance.
2 nd Session	• He converses with three children nearby

	• Prefers to maintain a comfortable distance when keeping them company.
3 rd Session	• He preserves personal space by staying on his tricycle and standing under a tree • Distancing himself from others
4 th Session	• He often has the company of multiple fellow tricycle drivers and passengers

Subject E	
1 st Session	• They maintain a deliberate distance from one another • Ensuring not stand too close in proximity
2 nd Session	• He maintained a typical distance from the individuals with whom he had worked previously.
3 rd Session	• He maintained proximity to the individuals he had previously engaged in conversation with.
4 th Session	• He now initiates conversations with individuals, even those with whom he is not familiar or close.

4.1.6 People Who Stand Out

Table 6

People who Standout among Observed Subjects

Subject A	
1 st Session	• An elderly man wearing a black shirt engages in close conversations, standing far from others.
2 nd Session	• Three children, aged 10 and up, consisting of 1 boy and 2 girls, who visit him numerous times.
3 rd Session	• A young man with erratic behavior, screaming and displaying aggression towards tricycle drivers.

4 th Session	• The head of TODA, distinguished by a hat, gray shirt, and pants, who converses with most tricycle drivers, including him
-------------------------	--

Subject B	
1 st Session	• A 50-year-old male driver is frequently observed using his phone and engaging in conversations with others, radiating a very cheerful vibe.
2 nd Session	• A female driver, aged between 30 and 40, from the TODA is frequently seen wearing attire similar to other male drivers and consistently interacting with fellow drivers.
3 rd Session	• A tall man, likely standing between 5'8 to 6'0, is wearing a shirt and shorts, engaging in conversation with other drivers.
4 th Session	• The male driver in his 50s is joking around with the two kids in the terminal.

Subject C	
1 st Session	• The tricycle driver, who appears younger than other drivers, consistently wears an earphone and sports a trendy hairstyle.
2 nd Session	• The tricycle driver is with his wife and daughter at the terminal, conducting trips along with them • He wears casual attire, including a T-shirt, shorts, and flip-flops.
3 rd Session	• The tricycle driver, who appears quite old, was playfully interacting with the child of the tricycle driver who brings his family along

	• He is wearing a shirt and pants, uniformly.
4 th Session	• The driver is eating alone in the food stall and seems to have become quite wary of our presence.

Subject D	
1 st Session	• This driver is dressed appropriately, and he consistently ensures that his tricycle is in working condition.
2 nd Session	• During breaks, this person is typically surrounded by a group of younger tricycle drivers, creating an energetic and lively atmosphere.
3 rd Session	• An older tricycle driver, attired in a traditional uniform, occasionally engages in brief conversations with this individual.
4 th Session	• One driver stands out by wearing a bright, floral-patterned uniform, adding a distinctive touch to the overall uniformity • This driver is particularly talkative, contributing to a more interactive and engaging tricycle experience for passengers.

Subject E	
1 st Session	• A young male, dressed in a dark blue shirt, stands in contrast to the older tricycle driver adorned in a white shirt • There are two female tricycle drivers present, and two men in their thirties are noticeable in their attire, donning white long sleeves with distinctive yellow patterns
2 nd Session	• Among the group, four men stand out as they are dressed in civilian shirts and shorts, distinct from the

	others who wear proper uniforms consisting of white shirts and pantaloons • One individual is notably talkative, in contrast to the rest who maintain a silent and reserved demeanor • Two of the civilians are identified as working with their families, while an older man, also in uniform, is engaged in work alongside his daughter. All of them are situated outside, near the driver's backseat.
3 rd Session	• One person is dressed in civilian clothes, while the other is in uniform and accompanied by his wife.
4 th Session	• In this session, he stands out due to his distinctive T-shirt design, and he is notably more talkative and loud compared to the others

4.2 Interview

Table 7

Gathered Interview data from Observed Subjects

Interview Question 1: I noticed that you don't talk much with your fellow tricycle drivers, how do you feel that way?			
Individual	Quoted Answers	Interpretation	Common Theme
Subject A	• "It's not that I don't get along with them, it's just that I find walking and sometimes watching more comfortable for me."	The tricycle driver is explaining that it's not a matter of not getting along with others, but rather a personal preference for finding comfort in	"Personal Comfort" The emphasis on personal comfort and the mention that their choice of walking and

		walking and occasionally observing instead of engaging in other activities. The emphasis is on the individual's comfort level with walking and observing, suggesting that these activities suit their preferences more than other alternatives.	sometimes watching is driven by their comfort rather than any issues with getting along with others.
Subject B	I prefer sitting in my tricycle while waiting for passengers, but there are times when I prefer mingling with other drivers here in our association."	The tricycle driver expresses a preference for waiting inside their tricycle for passengers, but there are instances when they choose to socialize with other drivers in their association.	
Interview Question 2: Based on what I observed of you, you take 5-8 minutes to get back to the terminal. May I know the reason for this?			
Individual	Quoted Answer	Interpretation	Quoted Answer

Subject A	"Because when we drop off passengers, we wait for potential passengers at the street corner. When we come back, there are still passengers waiting, so it's not a waste of gas."	The tricycle drivers drop off passengers, they wait at a street corner for potential passengers to pick up. The strategy is to ensure that when they return, there are still passengers waiting, minimizing the wastage of gas. This approach is a practical way to optimize their time and resources by ensuring a continuous flow of passengers and avoiding unnecessary fuel consumption during idle periods.	
Subject B	"We all know the current situation where traffic is unavoidable. That's also one of the reasons why we take longer, because of the	The tricycle driver acknowledges the prevailing circumstances marked by unavoidable traffic congestion. The delay in their	

	traffic and even the closed roads due to road construction. That's why we need to take alternative routes to transport passengers."	operations is attributed to both regular traffic and road closures resulting from ongoing road construction. To navigate through these challenges, tricycle drivers find it necessary to take alternative routes to ensure the efficient transport of passengers. It highlights the adaptability and resourcefulness required in their work environment affected by traffic conditions and infrastructure projects.	
Interview Question 3: During my observation, I noticed the hot weather at the terminal, especially in the morning. Can you describe how you cope with the hot weather at the terminal when you are working?			
Individual	Quoted Answer	Interpretation	Common Theme

Subject A	"I just endure the heat because I need money for my family's food and my child's education. I just drink cold water and stand under a tree to alleviate the heat a bit."	The tricycle driver is enduring the heat primarily out of necessity. The motivation behind enduring the discomfort is the financial need to support their family's food and their child's education. The tricycle driver adopts practical measures, such as drinking cold water and standing under a tree, to alleviate the heat to some extent while continuing to work for the well-being of their family. It reflects the sacrifices and resilience driven by familial responsibilities.	“Priorities for the needs of family” The theme of enduring challenging conditions, specifically the heat. The tricycle driver mentions enduring the heat for the sake of earning money for their family's needs, particularly for food and their child's education. The mentioned coping mechanisms include drinking cold water and standing under a tree to alleviate the heat to some extent.
Subject B	“It’s challenging for us tricycle drivers to work in the heat,	The difficulty faced by tricycle drivers who work in a	

	especially since our terminal is not in a very shaded area. But I need to or we need to work despite the hot weather for the sake of my family or our families, and it requires enduring the work for our family.”	location with little shade, making it challenging due to the heat. However, despite these challenges, the tricycle drivers emphasize the necessity of working for the sake of their families, highlighting the importance of enduring the hardships of the job.	
Subject D	• "Just drink water and don't get stressed, always smile so that our bodies can relax."	A simple approach to relaxation, recommending drinking water and maintaining a positive attitude with a smile to promote relaxation of the body.	
Interview Question 4: I also noticed, from my observation, that most of the drivers here at FATWIBA TODA are in their mid-40s to 50s. May I know what your thoughts are on this?			
Individual	Quoted Answer	Interpretation	Common Theme

Subject B	"At our age, no other company or job will accept us because we are already old. Unlike others who are younger and have had the opportunity to study, making it easy for them to find employment while they are still young. So, at our age, we need to endure working for our families. It may be difficult, especially for someone like me who is getting older, but as long as there is work like this available for us, it is better because what matters is that we are working with dignity."	The tricycle driver expressed the challenges they face in finding employment due to their age. They mention that, unlike younger individuals who have had the opportunity to study and find jobs easily, they, at their current age, encounter difficulties in securing work. Despite the challenges, they emphasize the importance of persevering and working hard for their families. The speaker acknowledges the hardships, especially considering their advancing age, but values the dignity that comes with having a job,	“Age employment difficulties and Tenurity” The tricycle driver consistently emphasizes the difficulty they and others of their age face in being accepted by companies or finding jobs, especially when compared to younger individuals who may have had the opportunity to study and secure employment more easily and it also underscores the importance of the seniors in the context of the tricycle community and emphasizes their historical contributions.
-----------	--	---	--

		emphasizing that the crucial aspect is that they are engaged in honorable work.	
Subject C	“Because the seniors have been here for a long time. They started the toda, and we are like new members. I've been driving a tricycle for around 7 years now.”	The tricycle driver explains that the seniors, who have been part of the community for an extended period, played a significant role in establishing the tricycle association (referred to as "toda"). Others are described as new members, indicating a distinction in tenure within the group. The statement also includes a personal note, stating that the speaker has been driving a tricycle for approximately seven years, highlighting their	

		experience within the community. Overall, the response suggests a recognition of the seniors' historical role, a sense of hierarchy or seniority, and an acknowledgment of the speaker's duration of involvement.	
Interview Question 5: During my four days of observation at FATWIBA TODAI, I noticed that you are always wearing a white shirt, may I know the reason?			
Individual	Quoted Answer	Interpretation	Common Theme
Subject A	"We wear white uniforms. Whatever color our tricycle is, that's also the color we should wear when working."	There is a practice of wearing uniforms among individuals, specifically white uniforms. The color of the tricycle is associated with the color of the attire worn while working. In essence, there is a coordination or matching of the tricycle's color with the uniform,	

		emphasizing uniformity and a standardized appearance among the tricycle drivers during their work.	
Interview Question 6: I also noticed that you always stand up and walk around when your tricycle is still in line; may I know what you think of doing that kind of behavior?			
Individual	Quoted Answer	Interpretation	Common Theme
Subject A	"When we're waiting, we can stroll around and buy food whenever we want."	When the tricycle drivers are in a waiting period, they have the freedom to move around and purchase food at their convenience. It suggests a flexible and relaxed environment during their waiting times, allowing them to engage in activities such as strolling and buying food without strict restrictions or schedules.	

Interview Question 7:

Based on what I observed of you, I noticed that you often look around while waiting for a passenger. How do you feel about this?

Individual	Quoted Answer	Interpretation	Common Theme
Subject B	“There are times when I just prefer to sit in my tricycle than walk around, especially when the weather is hot. I should stay in the tricycle than to wander around. I can observe the people around me more effectively this way.”	The tricycle driver expresses a preference for sitting inside their tricycle rather than walking around, particularly when the weather is hot. They believe it's more comfortable to stay in the tricycle and mention that it allows them to observe the people around them more effectively.	

Interview Question 8:

Noticing several passenger and driver interactions in the terminal, were there any differences in tricycle services before and after the pandemic?

Individual	Quoted Answer	Interpretation	Common Theme
Subject C	"Yes, because during the pandemic, there were no passengers, but	The tricycle driver is describing the size or significance of a change in the number of	

	now there are because it's okay now."	passengers. During the pandemic, there were no passengers, but now there are, suggesting an improvement in the situation.	
--	---------------------------------------	---	--

Interview Question 9:

Are you satisfied with the quality of tricycle services or you're looking forward for improvements?

Individual	Quoted Answer	Interpretation	Common Theme
Subject C	"We hope to have more passengers and fare increases because the cost of gas is rising, that's what we hope to increase in our earnings."	The tricycle driver expresses the hope for an increase in both the number of passengers and fares. This hope is motivated by the rising cost of gas, and the speaker desires an increase in their earnings to offset this expense.	

Interview Question 10:

With the toda having female tricycle drivers, how do you perceive this changes that happened over time?

Individual	Quoted Answer	Interpretation	Common Theme
Subject C	"It doesn't matter if you're a woman,	An inclusive and non-discriminatory	

	gay, or whatever you are; it's just a way of making a living. If they want to earn a living, go ahead and earn a living."	perspective, emphasizes that one's gender or identity doesn't matter in the context of making a living. It encourages everyone, regardless of gender or identity, to pursue their livelihood without facing judgment or barriers.	
--	--	--	--

Interview Question 11:

We've noticed how well you provide tricycle services even with the accessibility of technology and gadgets such as phone, or were there any instances that this actually affected your work in some way?

Individual	Quoted Answer	Interpretation	Common Theme
Subject C	"We easily receive information and announcements such as strikes or any news that may affect our work and the trips we do".	The tricycle driver is expressing that they and others in their context have easy access to information and announcements, particularly those related to strikes or any news that could impact their work	

		and the trips they undertake. The statement suggests that staying informed about external factors is important for them in managing their work, ensuring smooth operations, and responding effectively to any developments that might affect their activities, such as strikes or other significant events.	
--	--	---	--

Interview Question 12:

I observed that you encounter unexpected situations like road closures or diversions during tricycle rides, how do you handle this situation?

Individual	Quoted Answer	Interpretation	Common Theme
Subject D	“In that kind of situation, caution is needed. When encountering potholes, move slowly to avoid accidents”.	A need for caution in such situations, particularly when navigating uneven terrain or potholes to prevent accidents.	

Interview Question 13:

I observed that passenger safety is a priority for you during tricycle

rides, can you share how you ensure and prioritize their safety?			
Individual	Quoted Answer	Interpretation	Common Theme
Subject D	"For the safety of passengers, caution is needed, and overloading should be avoided."	The importance of caution and avoiding overloading for the safety of passengers.	
Interview Question 14: I observed that your tricycle is consistently in good working condition. Could you describe the maintenance routines you follow to achieve this?			
Individual	Quoted Answer	Interpretation	Common Theme
Subject D	"It's a protocol in the office to take care of city vehicles. They should always be clean, with a trash bin inside so it's not embarrassing for passengers. Also, for the safety of the engine, it's necessary to check the oil, gasoline, and all parts to ensure they are in good condition."	The office emphasizes the proper care of city vehicles, particularly tricycles. The vehicles are expected to adhere to certain standards, such as cleanliness, with the presence of a trash bin inside to maintain a presentable environment for passengers. Additionally, there's	

		an emphasis on safety measures, requiring regular checks on the engine, including the oil, gasoline, and all parts, to ensure they are in good working condition.	
--	--	---	--

Interview Question 15:

During my observation, I noticed that you always talk to your fellow driver while you are in line and waiting for a passenger. May I know what you like most about driving your tricycle and talking with people in the terminal?

Individual	Quoted Answer	Interpretation	Common Theme
Subject E	“Of course, it's fun because you get to go to different places, and you're with your fellow tricycle drivers, plus you get to interact with the passengers.”	The tricycle driver expresses happiness and enjoyment in their work as a tricycle driver. They find joy in the opportunity to travel to various places, the camaraderie with fellow tricycle drivers, and the interactions with passengers.	

Interview Question 16:

Based on what I observed of your activities here at the terminal, I noticed that you are always present. Can you tell me about any problems or positive experiences that have occurred while performing your job?

Individual	Quoted Answer	Interpretation	Common Theme
Subject E	“Outing, we have swimming activities, and we celebrate birthdays every summer from April to May. However, we also face challenges like having no passengers, weak business, and difficulty getting hired.”	The tricycle drivers' recreational activities, such as outings with swimming and birthday celebrations during the summer months of April to May. However, it also highlights the challenges they encounter, including the lack of passengers, slow business, and difficulties in finding employment.	

Interview Question 17:

I notice that most of your passengers are happy to ride with you. How do you make the tricycle ride a fun and friendly experience for both you and your passengers?

Individual	Quoted Answer	Interpretation	Common Theme
Subject E	"Our regular passengers always	They often have loyal customers	

	ride with us, so even if we don't negotiate the fare, they already know, and we are kind to the passengers, not rude to them."	who are familiar with the fare rates, and the drivers maintain a friendly and polite attitude toward the passengers.	
Interview Question 18: Seeing that there have been changes in roads these past few months due to the construction of a water company, how does this affect you when it comes to tricycle services, especially if some of the roads are congested or altered?			
Individual	Quoted Answer	Interpretation	Common Theme
Subject E	"We avoid and take different routes to travel smoothly and ensure a proper journey."	The individuals deliberately avoid certain routes	

Chapter 5

Conclusion and Discussion

This chapter presents the summary of findings, the conclusion drawn and the recommendations based from the study

5.1 Conclusions

5.1.1 The challenges of the observed subjects

Tricycle drivers in Fatwiba D.P. Toda in Nangka, Marikina faced challenges and this includes:

Tricycle drivers face difficult challenges as a result of the frequent concerns of traffic congestion and decreasing road conditions. The comprehensive study dives into the various ways in which these problems combine, investigating their significant impacts on tricycle drivers' operational efficiency, travel durations, and, eventually, their overall job satisfaction. Discovering all aspects of this interaction provides an in-depth viewpoint, providing insight on the multiple implications that traffic and road conditions impose on tricycle drivers' daily experiences. Additionally, tricycle drivers are particularly capable of the effects of weather conditions. Rainy seasons pose obstacles such as slippery roads, decreased visibility, and increased vehicle breakdowns. Harsh weather significantly reduces the effectiveness of their services but also puts them at risk of health conditions.

The economic landscape significantly influences the livelihood of tricycle drivers. This section explores how the constant fluctuations in fuel prices directly impact their operational costs. The relationship between tricycle drivers' salaries and gasoline prices provides insight into the current economic challenges they encounter. It was observed that stereotypes among society exist for tricycle drivers. Their general well-being and self-esteem may be negatively impacted by discrimination resulting from the belief that their line of employment has a low status. Their daily day life is made more difficult by this social stigma.

5.1.2 The Coping behaviors of observed subjects

First the tricycle drivers are dealing with traffic concerns and congestion in the way that they first fill their tricycles with passengers so that they still get enough income, and they take shortcuts to facilitate their trip and return immediately to tricycle terminal. Second, that's why the tricycle drivers respond to these difficulties by increasing the fare just enough to compensate for the high price of crude oil, and they fill their tricycles before leaving if there is no special ride or no co-passenger. Third, they address these challenges through disciplined compliance with traffic laws and on-time registration of motors and licenses. Fourth, most of the tricycle drivers put on tarps to avoid getting wet from the rain, and they also use raincoats, when it comes to driving, they avoid flooded areas, and they only drive slowly to avoid any accidents. Lastly, all of the tricycle drivers are passing these words as a joke, or maybe they don't listen to this type of stereotyping, they think more about their families as inspiration for their work.

5.1.3 The overall profile of observed subjects in terms of

1. Behaviors

The tricycle drivers have displayed variety of behaviors, but most of the time they're quiet and reserved, watching television or conversing amongst each other and those whom they seem to be familiar with and showing playfulness when with children.

2. Thoughts

The tricycle drivers mostly reserved and most of the time just intend to focus on their job, on the trips that they may have, while they also tend to commonly engage in conversation with each other, probably about the affairs related to their community

3. Emotions

The tricycle drivers displayed a range of feelings. They showed happiness, dismay, and intrigued as they were entertained when conversing with other drivers and when watching the television. They also have shown enthusiasm, dismay, and calmness when facing and entertaining possible passengers.

4. Socialization

The tricycle drivers interacted and socialized with their co-tricycle drivers, their passengers and possible passengers, those who they are familiar with, and as well as those people who happen to just pass by and inquires something from them, some exhibited high extraverted ness when engaging with others displaying high sense of leadership and some who are mostly reserved.

5.2 Recommendations

Based on the findings and conclusions, the researchers recommend that:

- 1. Future researchers** - should administer in-depth observation to gain a nuanced understanding of the daily routine, thoughts, and emotions of tricycle drivers.
- 2. Barangay authorities** - should initiate efforts to enhance the infrastructure-related to tricycle routes and terminals. Ensuring well-maintained for tricycle drivers can contribute to smoother flow and improve overall safety for both drivers and passengers.
- 3. Tricycle drivers** - should establish a consistent daily routine to better management. Encourage them to connect with peers for emotional support and to create a supportive community among fellow drivers.

October 26, 2023

Mr. Oscar P. Morales
President of FATWIBA
Corner Fairlane St. Conception Uno, Marikina City

Request for permission to do field observation at FATWIBA D.P. TODAI

Dear Mr. Morales,

We are third year students of San Mateo Municipal College taking up B.S. Psychology. One of our subjects is Field Methods of Research, wherein we are required to apply our knowledge about field research through unobtrusive and passive observation of people in a particular location.

In this regard, we would like to request your kind permission to allow us to do passive, quiet observation within the premises of FATWIBA D.P. TODAI for 4 whole mornings (8:00 am -12:00 nn).

After the observation we also would like to interview a small number of people from FATWIBA D.P. TODAI after work hours.

Rest assured that we will not be a hindrance to your operation, that the name of your office/establishment will not be mentioned without your permission, that the people we observe will remain anonymous in our research and that the data will be used for research only.

We are hoping for your kind consideration and approval.

Respectfully

John Lloyd Baynosa

Myra Lorilla

Sheryl Anne Viasanta

Ma. Joanna Blanca
